Tool: Lambert

Names	Lambert Plexor
Category	Malware
Type	Info stealer
Description	<p>From the start, Symantec suspected Longhorn was an outlier, saying it appeared to be different from other potential cybercrime groups. That assessment was based in part on Longhorn using a zero-day software exploit, which Symantec found embedded within a Microsoft Word document. The exploit delivered a data-stealing tool called Plexor.</p> <p>'The malware had all the hallmarks of a sophisticated cyberespionage group,' Symantec writes. 'Aside from access to zero-day exploits, the group had preconfigured Plexor with elements that indicated prior knowledge of the target environment.'</p>
