CYBER REPORT MANUFACTURING 2025

The manufacturing industry, which is integral to the economy, involves the production of goods using labor, machines, tools, and chemical or biological processing. Manufacturing organizations face significant cybersecurity risks that can lead to data breaches, operational disruptions, and financial losses. They often handle sensitive data such as intellectual property, trade secrets, proprietary production data, and customer information. To mitigate these threats, they must implement comprehensive cybersecurity measures and continuously monitor and update security protocols. Learn about the risks for manufacturing in our report.

MARKET INSIGHTS

- 634,000 Manufacturing companies in the United States
- 2,305 Total number of reported cyber incidents annually
- \$5.56M Average cost of each reported cyber incident

Our Approach

To stay ahead of adversaries, organizations need a proactive, always-on approach that prepares their defenses, actively monitors for threats and responds rapidly when incidents occur. SpearTip delivers an integrated cybersecurity framework to fit the specific needs of all our clients.

Prepare

Enhanced cybersecurity through expert guidance in strategy, risk management, and threat prevention.

Monitor

Real-time SOC monitoring detects and responds to threats to protect data, reputation, and revenue.

Respond

Rapid incident response mitigates breaches, minimizes damage, restores operations, and finds root cause.
