Tool: XDLoc

Names	XDLoc
Category	Malware
Type	Reconnaissance
Description	(ESET) XDLoc is a location discovery plug-in that retrieves a list of nearby Wi-Fi access points. It uses the WlanGetNetworkBssListWindows API function to retrieve the list of nearby BSSIDs and their signal strengths (RSSI). This information is then written in \wgl.dat. We believe that this information can be combined with databases of geolocation of known Wi-Fi access points in order to approximate the location of the victim's device.
