Tackle breaches confidently

Partner with world-renowned experts. Our team combines a deep understanding of global attacker behavior with over two decades of frontline experience to provide comprehensive [incident response services](#), including preparedness, technical response, and crisis management.

A good incident response plan turns chaos into clarity

Best practices for incident response planning

Get flexible access to experts with a Mandiant Retainer

Adapt to changing priorities and access the services you need, without reworking contracts. The [Mandiant Retainer](#) is a flexible incident response retainer that gives organizations immediate access to cybersecurity experts with pre-negotiated terms, 2-hour response times, and proactive services to strengthen your defenses.

Protect your brand with strategic crisis communications

Don't let a cyberattack define your brand. [Mandiant crisis communication services](#) provide the strategic readiness you need to respond effectively to modern, multifaceted attacks. Partner with us to safeguard your stakeholders, mitigate reputational risk, and preserve the brand you've worked hard to build.

Uncover past and present threats in your network

Run a [compromise assessment](#) to discover if you've been breached and proactively hunt for hidden attackers. Our experts combine extensive incident response experience with real-time threat intelligence to find evidence of past or ongoing intrusions across your enterprise environment.

Increase business resilience and strategic readiness

Manage cyber risk, make better business decisions

Assess and strengthen your defense capabilities

Run a [cyber defense assessment](#) to gain a clear understanding of your defensive capabilities and receive a prioritized roadmap to build a stronger, more resilient security program, prepared for any challenge. Harden your technical controls, and improve the performance of every critical defense function—from initial threat detection to [full environment recovery](#).

Build frontline skills with Mandiant Academy

Test and strengthen your security program with real-world attacks

Pressure-test your security program with [realistic, objective-based assessments](#). Our experts mimic genuine threat actor behavior—using the latest TTPs from the frontlines—to help you understand your weaknesses from an adversary’s perspective and build a truly resilient defense.

Watch Mandiant red teamers in action: Pushing the limits of red teaming

Push the boundaries of red team assessments

See how your defenses perform against a sophisticated, goal-oriented adversary. Pushing beyond standard testing, our [red team assessments](#) emulate a real attacker pursuing custom objectives, revealing complex attack paths that conventional assessments often miss. This unique engagement provides an unparalleled opportunity to harden your defenses by combatting a realistic threat before it happens.

Harden your cloud with an architecture assessment

Secure your assets and data across any cloud environment with a [cloud architecture assessment](#)—from AWS and Azure to Google Cloud. Identify and mitigate commonly exploited misconfigurations, reduce your attack surface, and gain the visibility needed to effectively detect and respond to threats across your entire cloud estate.

Expose risks with offensive security and penetration testing

Improve your security team’s detection and response capabilities against realistic attack scenarios with a full range of [offensive security services](#), from collaborative assessments to testing specific assets and capabilities across technologies.

Elevate your cyber defense capabilities across all critical functions

Integrate and optimize Google SecOps with Mandiant

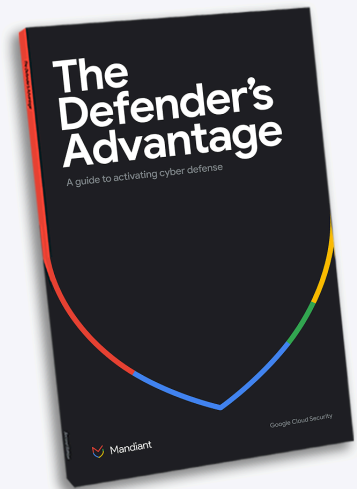

Balance cyber risk with rapid business innovation

Enable business innovation by translating complex security topics into the language of risk and value for executive leadership and the board. Bridge the gap between security and business objectives with [executive](#)

[cybersecurity services](#) to establish security as a strategic enabler, helping the business achieve its innovation goals securely.

Build a resilient cyber defense center

Accelerate decisions with custom Mandiant insights

Inform and accelerate your security decisions with [customized cyber risk research and analysis](#), personalized for your specific environment, use cases, and stakeholder needs. Use these tailored insights to enhance your security posture, drive effective hunt missions, and strengthen your vulnerability management for a more resilient security program.

Embed frontline intelligence experts into your team

Build best-in-class cyber threat intelligence capabilities

Secure your AI systems and leverage AI to strengthen your cyber defenses

Secure your use of AI, end-to-end

[Evaluate the end-to-end security of your AI systems](#) and implementation to assess and safeguard your training data, models, and custom applications before attackers can exploit them. Build upon the extensive, combined, real-world experience of Mandiant and Google in protecting production AI systems.

Battle-test your AI systems and defenses

Pave the path towards an agentic defense future

Tap specialists across a range of services that fit your business challenges

Mandiant cyber risk partners

Mandiant collaborates with a global network of leading law firms, insurance providers and brokers, ransomware negotiators, and other specialized firms to help you mitigate risk and minimize liability from cyberattacks. This integrated ecosystem simplifies the cyber risk management process for executives and security teams by improving threat visibility, accelerating incident response, and preparing your organization for a crisis before it occurs.

Trusted by leading organizations

The CIO of the University of California, Riverside describes how Mandiant delivers industry-leading expertise that combined with Google SecOps has transformed their security.

The UK's largest homewares retailer, Dunelm talks about landing a one-two punch against cyber threats with Google SecOps and a Mandiant Retainer.

CISOs from AT&T and Coinbase join Mandiant's CTO to share and discuss firsthand experiences and insights from the frontlines on responding to nation-state actors and complex insider risk.
