credentials, two-factor authentication codes, and session cookies to hijack accounts.

The threat actors, known as EvilProxy, targeted thousands of customers who pay monthly fees for premium services. The attacks involve sending phishing emails that appear to be from EvilProxy pages for customer support.

How U.S. Firms Can Protect Against Phishing

1. Employee Training: Implement regular security awareness training to educate employees on recognizing phishing attempts and safe email practices.
2. Email Filtering and Blocking: Use advanced email filtering and blocking solutions that can detect and prevent phishing emails before they reach employees' inboxes.
3. Multi-Factor Authentication: Enable multi-factor authentication on all company accounts and require it for sensitive data access, even if they obtain credentials.
4. Vulnerability Patching: Regularly update software and patch known redirection vulnerabilities to prevent attackers from exploiting weaknesses.
5. Endpoint Security: Deploy robust endpoint protection tools to detect and prevent malicious activities on employees' devices.
6. Incident Response Plan: Develop and regularly update an incident response plan to quickly detect, mitigate, and recover from security incidents like phishing attacks.
7. Threat Intelligence Sharing: Collaborate with industry peers and share threat intelligence to stay informed about emerging threats and tactics used by cybercriminals.
