

# **BSidesCharm 2023 - It's all Magic(RAT) – A look into recent North Korean nation-state attacks**

Published: 2023-05-24 · Archived: 2026-04-05 18:35:05 UTC

This presentation will illustrate the entire cyber-kill chain, hands-on-keyboard activity and corresponding MITRE ATT&CK mappings for a series of successful intrusions carried out by the North Korean APT group “Lazarus” against energy companies across the world. We also provide an analysis of MagicRAT and associated, bespoke malware families used by the APT group. Asheer Malhotra is a threat researcher specializing in malware analysis, reversing, detection technologies and threat disclosures within Cisco Talos. He has been researching malware threats for about a decade now at FireEye, Intel, McAfee and now at Talos. His key focus is tracking nation state attacks (APTs) across the world. Asheer holds an M.S in Computer Science with a focus on Cyber Security.
