## Tool: EYService

Names	EYService
Category	<a href="#">Malware</a>
Type	<a href="#">Backdoor</a>
Description	<a href="#">(Epic Turla)</a> The main functionality orchestrating the different subcomponents is contained within Data.bin, later renamed to 'svchost.exe'. The orchestrator takes 17 different three digit codes to divert functionality within a giant switch statement. Some of the codes have not been fully implemented up to the latest samples I've found so far, which further suggests a continued developmental effort.
