LoginItemsAE

Last Revision:	Version 1.0, 2005-10-17 Uses Apple events to manipulate the list of login items (items launched when you log in).
Build Requirements:	Xcode 2.1
Runtime Requirements:	Mac OS X 10.2 or later

Show how to manipulate the list of login items, that is, the items that are launched when you log in. The sample works by sending Apple events to the "System Events" process, which has an AppleScript dictionary for manipulating login items.
