```
Sharp-SMBExec.exe hash:"hash" username:"username" domain:"domain.tld" target:"target.domain.tld"  
command:"command"
```

This Assembly will allow you to execute a command on a target machine using SMB by providing an NTLM hash for the specified user.

Option	Description
username*	Username to use for authentication
hash*	NTLM Password hash for authentication. This module will accept either LM:NTLM or NTLM
domain	Domain to use for authentication. This parameter is not needed with local accounts or
target	Hostname or IP Address of the target.
command	Command to execute on the target. If a command is not specified, the function will ch
ServiceName	Default = 20 Character Random. The Name of the service to create and delete on the ta
-CheckAdmin	Check admin access only, don't execute command
-Help (-h)	Switch, Enabled debugging [Default='False']
-Debug	Print Debugging Information along with output
-ForceSMB1	Force SMB1. The default behavior is to perform SMB Version negotiation and use SMB2 i
-ComSpec	Prepend %COMSPEC% /C to Command [Default='False']
