## Tool: Meterpreter

Names	Meterpreter
Category	<a href="#">Tools</a>
Type	<a href="#">Loader</a>
Description	<p>Meterpreter is an advanced, dynamically extensible payload that uses in-memory DLL injection stagers and is extended over the network at runtime. It communicates over the <a href="#">Metasploit Stager</a> socket and provides a comprehensive client-side Ruby API. It features command history, tab completion, channels, and more.</p> <p>Meterpreter was originally written by skape for <a href="#">Metasploit</a> 2.x, common extensions were merged for 3.x and is currently undergoing an overhaul for Metasploit 3.3. The server portion is implemented in plain C and is now compiled with MSVC, making it somewhat portable. The client can be written in any language but Metasploit has a full-featured Ruby client API.</p>
