Description([Kaspersky](#)) LockBit ransomware is malicious software designed to block user access to computer systems in exchange for a ransom payment. LockBit will automatically vet for valuable targets, spread the infection, and encrypt all accessible computer systems on a network. This ransomware is used for highly targeted attacks against enterprises and other organizations. As a self-piloted cyberattack, LockBit attackers have made a mark by threatening organizations globally with some of the following threats:

- Operations disruption with essential functions coming to a sudden halt.
- Extortion for the hacker's financial gain.
- Data theft and illegal publication as blackmail if the victim does not comply.
