This tool creates almost undetectable trojan virus to exploit windows machine.

NOTE : use python 2.7 , 32 bit to run this source code

features-->

- 1.)you can start a keylogger on target machine, and can get all key strokes in keystrokes file in real time.
- 2.)you can start a screen shorter to take continuous screen shot of target machine in real time.
- 3.)you can have complete control over target's cmd.
- 4.)all above 3 attacks can work simultaneously in different threads.

tutorial link --> <https://www.youtube.com/watch?v=bPHiR7x0itA&feature=youtu.be>

NOTE --> these are source files for the tool.... while building this tool... real python is used inside tool to build exploit on runtime , so built tool is different from the source file.

built tool is also attached in the repo with name "HackSpy Trojan Exploit.rar"
