apk.888_rat ([Back to overview](#))

888 RAT

According to ESET, this is a commercial, multiplatform RAT, originally developed for Windows and extended to Android. In short, it can steal and delete files from a device, take screenshots, get device location, phish Facebook credentials, get a list of installed apps, steal user photos, take photos, record surrounding audio and phone calls, make calls, steal SMS messages, steal the device's contact list, send text messages, etc.
