People

Claudio Guarnieri

Claudio Guarnieri is a security researcher mostly specialized in the analysis of malware, botnets and computer attacks in general. He's a core member of The Honeynet Project as a research fellow at the Citizen Lab, University of Toronto. He created the open source malware analysis software Cuckoo Sandbox and Viper and runs the Malwr free service. He published abundant research on botnets and targeted attacks and presented at conferences such as Hack In The Box, BlackHat, Chaos Communication Congress and many more. He continuously researches and writes on government surveillance and threats to journalists and dissidents worldwide and supports human rights organisations with operational security and emergency response.

Collin Anderson

Collin Anderson is a Washington D.C.-based researcher focused on measurement and control on the Internet, including network ownership and access restrictions, with an emphasis on countries that restrict the free flow of information. These efforts have focused on monitoring the international sale of censorship equipment, identifying harm in disputes between network operators, exploring alternative means of communications that bypass normal channels of control, and applying open data to shed new light on increasingly sophisticated restrictions by repressive governments.
