## Tool: GozNym

Names	GozNym
Category	<a href="#">Malware</a>
Type	<a href="#">Banking trojan</a> , <a href="#">Info stealer</a>
Description	<p>(<a href="#">IBM</a>) IBM X-Force Research uncovered a Trojan hybrid spawned from the <a href="#">Nymaim</a> and <a href="#">Gozi ISFB</a> malware. It appears that the operators of Nymaim have recompiled its source code with part of the Gozi ISFB source code, creating a combination that is being actively used in attacks against more than 24 U.S. and Canadian banks, stealing millions of dollars so far. X-Force named this new hybrid GozNym.</p> <p>The new GozNym hybrid takes the best of both the Nymaim and Gozi ISFB malware to create a powerful Trojan. From the Nymaim malware, it leverages the dropper's stealth and persistence; the Gozi ISFB parts add the banking Trojan's capabilities to facilitate fraud via infected Internet browsers. The end result is a new banking Trojan in the wild.</p> <p>Internally, GozNym works like a double-headed beast, where the two codes rely on one another to carry out the malware's internal operations.</p>
