NAME

gcloud iam service-accounts list - list all of a project's service accounts

SYNOPSIS

```
gcloud iam service-accounts list [ --filter = EXPRESSION ] [ --limit = LIMIT ] [ --sort-by = [ FIELD ,... ] ] [ --uri ] [ GLOUD WIDE FLAG ... ]
```

DESCRIPTION

List all of a project's service accounts.

EXAMPLES

To list all service accounts in the current project, run:

See more code actions.

```
gcloud iam service-accounts list
```

LIST COMMAND FLAGS

[--filter](#) = *EXPRESSION*

Apply a Boolean filter *EXPRESSION* to each resource item to be listed. If the expression evaluates `True`, then that item is listed. For more details and examples of filter expressions, run `$ gcloud topic filters`. This flag interacts with other flags that are applied in this order: `--flatten`, `--sort-by`, `--filter`, `--limit`.

[--limit](#) = *LIMIT*

Maximum number of resources to list. The default is `unlimited`. This flag interacts with other flags that are applied in this order: `--flatten`, `--sort-by`, `--filter`, `--limit`.

[--sort-by](#) =[*FIELD* ,...]

Comma-separated list of resource field key names to sort by. The default order is ascending. Prefix a field with ```~``` for descending order on that field. This flag interacts with other flags that are applied in this order: `--flatten`, `--sort-by`, `--filter`, `--limit`.

[--uri](#)

Print a list of resource URIs instead of the default output, and change the command output to a list of URIs. If this flag is used with `--format`, the formatting is applied on this URI list. To display URIs alongside other keys instead, use the `uri()` transform.

GLOUD WIDE FLAGS

These flags are available to all commands: [--access-token-file](#), [--account](#), [--billing-project](#), [--configuration](#), [--flags-file](#), [--flatten](#), [--format](#), [--help](#), [--impersonate-service-account](#),

`--log-http` , `--project` , `--quiet` , `--trace-token` , `--user-output-enabled` , `--verbosity` .

Run `$ gcloud help` for details.

NOTES

These variants are also available:

```
gcloud alpha iam service-accounts list
```

```
gcloud beta iam service-accounts list
```
