

# Net.exe Utility

By Archiveddocs

Archived: 2026-04-06 03:30:59 UTC

The Net.exe Utility component is a command-line tool that controls users, groups, services, and network connections.

## Services

This component includes Net.exe and Net1.exe.

## Associated Components

This component parses the command-line input and calls through to the appropriate Net\* or WNet\* API.

## Settings

There are no configurable settings for this component.
