

NcFTP Client

Archived: 2026-04-05 17:58:22 UTC

NcFTP Client (also known as just *NcFTP*) is a set of **FREE** application programs implementing the *File Transfer Protocol* (FTP).

The current version is: **3.3.0** (April 23, 2025).

The program has been in service on UNIX systems since 1991 and is a popular alternative to the standard FTP program, `/usr/bin/ftp`. *NcFTP* offers many ease-of-use and performance enhancements over the stock ftp client, and runs on a wide variety of UNIX platforms as well as operating systems such Microsoft Windows and Apple Mac OS X.

For more information about the **client**, [send us e-mail](#). For more information about our **server** product, please see the [NcFTPd Server](#) home page.

The programs are free, but we would appreciate a donation if you find them useful. Your support allows us to keep maintaining the project!
