## APT group: Tiny Spider

Names	Tiny Spider ( <i>CrowdStrike</i> )	
Country	[Unknown]	
Motivation	<a href="#">Financial crime</a>	
First seen	2015	
Description	<p>(<a href="#">ForcePoint</a>) It all starts with the delivery of a small loader called TinyLoader, an obfuscated executable with simple–yet powerful –downloader functionality. Upon execution, it will first brute force its own decryption key (a 32-bit value, meaning this takes a fraction of second on modern PCs) before using this to decrypt the main program code.</p> <p>The core functionality of the decrypted code is communication with a set of hardcoded C2 servers by IP and port. If the C2 is active, it will provide what is effectively a piece of shellcode, encrypted by another 32-bit constant. This shellcode is not ‘fire and forget’: it instead sees the loader establish a semi-interactive two-way communication with the C2. Note that the earliest traits and mentions of TinyLoader go back to as far as 2015.</p>	
Observed	Sectors: <a href="#">Retail</a> . Countries: Worldwide.	
Tools used	<a href="#">PinkKite</a> , <a href="#">PsExec</a> , <a href="#">TinyPOS</a> , <a href="#">TinyLoader</a> .	
Operations performed	2017	A new family of point-of-sale malware, dubbed PinkKite, has been identified by researchers who say the malware is tiny in size, but can delivered a hefty blow to POS endpoints. <a href="https://threatpost.com/new-pos-malware-pinkkite-takes-flight/130428/">&lt;https://threatpost.com/new-pos-malware-pinkkite-takes-flight/130428/&gt;</a>
