

Binary Validator, Software S1215 | MITRE ATT&CK®

Archived: 2026-04-05 17:26:22 UTC

[Binary Validator](#) is a Mach-O binary file used during [Operation Triangulation](#).^[1] [Binary Validator](#) first collects information about the device, such as the device's phone number and a list of installed applications, before the deployment of the [TriangleDB](#) implant. After the actions are completed and the data is collected, [Binary Validator](#) encrypts and sends the data to the C2 server, and in turn, the C2 server sends the [TriangleDB](#) implant.
