

Use MDM to enable Remote Management in macOS - Apple Support

Archived: 2026-04-05 12:37:06 UTC

Use MDM to enable Remote Management in macOS

Learn how to control a remote Mac that is managed with Mobile Device Management (MDM).

To control a remote Mac that is managed by Mobile Device Management (MDM), use the [Enable Remote Desktop command](#). The Enable Remote Desktop command turns on [Remote Management](#) for all users with the "Observe" and "Control" options enabled.
