

FjordPhantom, Software S1208 | MITRE ATT&CK®

Archived: 2026-04-05 14:40:02 UTC

[FjordPhantom](#) is a malicious Android application first discovered in September 2024 with targets in Southeast Asia, specifically Indonesia, Thailand, and Vietnam. [FjordPhantom](#) was distributed through email and messaging applications. Once installed, the application launches a virtualization solution to steal important information, such as bank accounts, and to manipulate the user interface. The malicious activity from the virtualization solution runs alongside legitimate banking applications.^[1]
