## Tool: Separ

Names	Separ
Category	<a href="#">Malware</a>
Type	<a href="#">Info stealer</a>
Description	<p>(<a href="#">Kaspersky</a>) What sets this stealer apart is its use of a simply but tricky technique dubbed “<a href="#">Living off the Land</a>.” Hackers have used this popular tactic in the past to launch attacks based on legitimate files which are either common within the organization attacked, or are widely-used administrative tools. The legit files can be abused to perform malicious functions.</p> <p>For Separ, that means using very short script and batch files, as well as legitimate executables, to carry out all of its malicious business logic.</p>
