Tool: MalumPOS

Names	MalumPOS
Category	Malware
Type	POS malware , Credential stealer
Description	<p>(Trend Micro) We first discovered MalumPoS, a new attack tool that threat actors can reconfigure to breach any PoS system they wish to target. Currently, it is designed to collect data from PoS systems running on Oracle® MICROS®, a platform popularly used in the hospitality, food and beverage, and retail industries.</p> <p>MalumPoS was designed to be configurable. This means that in the future, the threat actor can change or add other processes or targets. He can, for example, configure MalumPoS to include Radiant or NCR Counterpoint PoS systems to its target list. With that inclusion, companies running on those systems will also be at risk.</p>
