Tool: KINS

Names	KINS Maple Zeus.Maple Kasper Internet Non-Security
Category	Malware
Type	Banking trojan , Credential stealer
Description	(IBM) Trusteer researcher Avidan Avraham, who conducted a thorough analysis on the new variant, explains that Zeus.Maple is a heavily modified version of Zeus 2.0.8.9. It implements unique browser re-patching techniques (browser patching is a method of stealing information from browser sessions; re-patching ensures the patch stays in place), an alternative naming generation algorithm, different anti-debugging and new anti-VM capabilities. It uses an encrypted configuration stored in the Windows registry, and in order to remain stealthy, Zeus.Maple distribution in the wild is limited and controlled.
