

Web Vulnerability Scanner | Acunetix

Archived: 2026-04-05 12:58:46 UTC

Automated vulnerability scanning for your web applications

Enjoy more peace of mind – without investing more of your limited time.

- Quickly find & fix vulnerabilities in websites, applications & APIs through automation.
- Uncover more true vulnerabilities with our unique dynamic + interactive (DAST + IAST) scanning approach.
- Get accurate, automated application security testing that scales like no other solution.

U.S. AIR FORCE

Only Acunetix gave us the ability to modify vulnerability checks and scan for the ever growing threat of web application vulnerabilities. The speed in which it performs the checks is also unbeatable.

M. Rodgers, member of the US Air Force IT Security team

Find What Other Scanners Don't

Acunetix isn't your typical web vulnerability scanner. Whatever your web presence, Acunetix has what it takes to manage the security of all your assets.

-

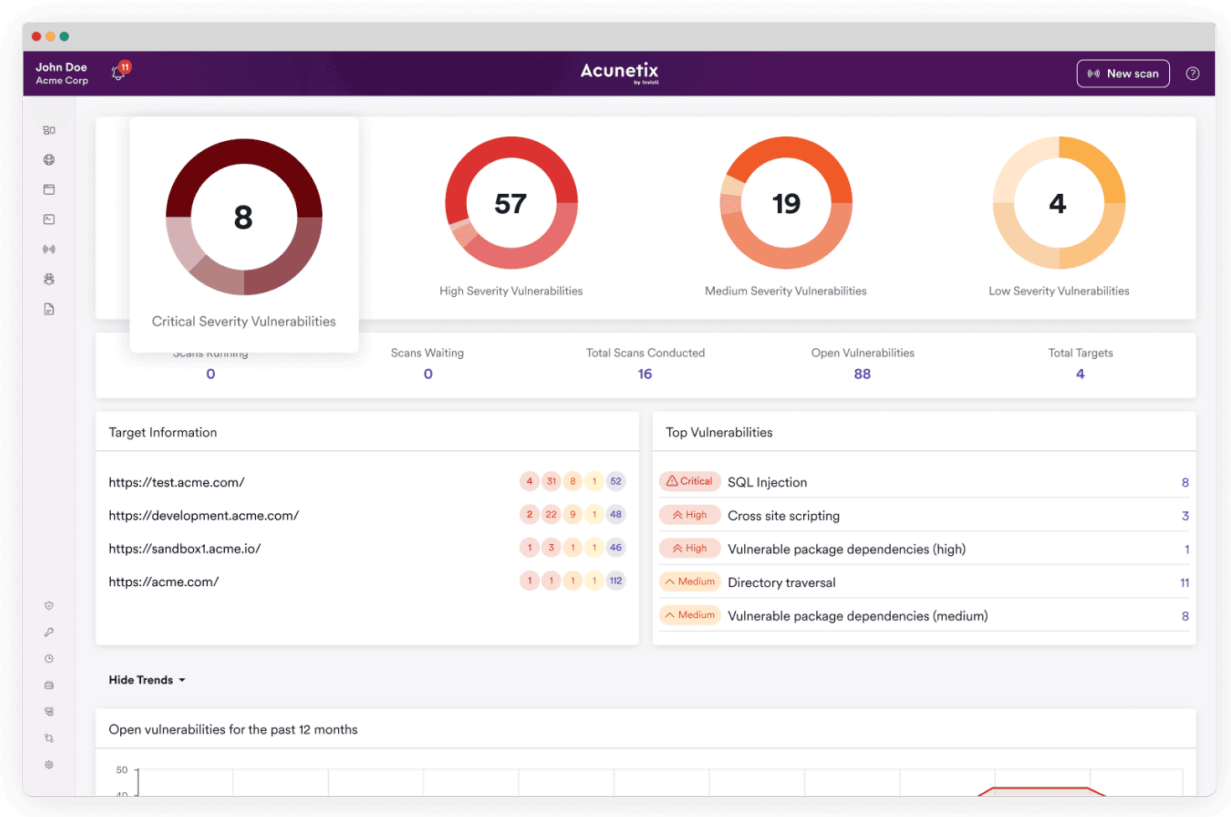

Detect over 7,000 vulnerabilities including SQL injections, XSS, misconfigurations, weak passwords, exposed databases and out-of-band vulnerabilities.

-

Scan all pages, web apps, and complex web applications, including single page applications with lots of HTML5 and JavaScript.

-

Advanced macro recording technology lets you scan complex multi-level forms and even password-protected areas of your site.

Better Results in Less Time

Get proof that vulnerabilities are real and not false positive and have Acunetix assess the severity of the issue, giving you immediately actionable insights.

-

Intuitive and easy to use, Acunetix eliminates lengthy setup and onboarding times. You can get set up and start scanning in just a few clicks.

-

Acunetix **verifies which vulnerabilities are real**, freeing your team from chasing down false positives.

-

Saves time with **lightning fast scans** that find key vulnerabilities immediately and don't hog your network or overload your servers.

Automation at Your Fingertips

Extend the power of Acunetix even further with automation.

-

Schedule and prioritize full scans or incremental scans according to your traffic load and specific business requirements.

-

Manage identified issues with built-in vulnerability management functionality or **integrate with your current tracking system**, whether it be Jira, Github, GitLab, Azure DevOps, Bugzilla, or Mantis.

-

Scan new builds automatically with modern CI tools, such as Jenkins, and import pre-seed crawl data from Fiddler, Burp, Paros, Postman, and more.

Acunetix Pricing

Get way more than just a vulnerability scanner (although our scanning is amazing). Acunetix is a complete application security solution that finds security vulnerabilities in every corner of every application and actually makes you safer with integrations and features to help you fix your issues fast!

- Detect 7,000 + web vulnerabilities
- Easy to use, intelligent crawling
- Combined DAST + IAST scan results
- SCA for open source components
- Native integrations into CI/CD and issue trackers
- Flexible API to integrate with everything else
- 99% customer support satisfaction
- Unlimited users
- Unlimited scans
- Run your first scan in minutes
