Okay, this is the last one in this short series, just to add the list-view control.

Same as tree-view, it accepts two interesting messages [LVM_INSERTGROUPSORTED](#) and [LVM_SORTGROUPS](#) that can help us to set up a callback pointing to [LVGroupCompare](#) function.

And same as tree-view, it's fairly popular. Testing my quick&dirty POC I crashed a number of programs including Total Commander, and Windows Explorer.

Modexp shared a nice POC [here](#).

Csaba shared a nice POC [here](#).
