LSMOD(8)

lsmode

LSMOD(8)

NAME [top](#)

lsmode - Show the status of modules in the Linux Kernel

SYNOPSIS [top](#)

lsmode [*OPTIONS*]

DESCRIPTION [top](#)

lsmode is a trivial program which nicely formats the contents of the */proc/modules*, showing what kernel modules are currently loaded.

OPTIONS [top](#)

-s, --syslog
Send errors to syslog instead of standard error.

-v, --verbose
Print messages about what the program is doing. Usually lsmode prints messages only if something goes wrong.

-V, --version
Show version of program and exit.

-h, --help
Print the help message and exit.
