

Reg

By Archiveddocs

Archived: 2026-04-02 10:54:00 UTC

Applies To: Windows Server 2003, Windows Vista, Windows XP, Windows Server 2008, Windows 7, Windows Server 2003 R2, Windows Server 2008 R2, Windows Server 2012, Windows 8

Performs operations on registry subkey information and values in registry entries. The **reg** commands include:

[Reg add](#)

[Reg compare](#)

[Reg copy](#)

[Reg delete](#)

[Reg export](#)

[Reg import](#)

[Reg load](#)

[Reg query](#)

[Reg restore](#)

[Reg save](#)

[Reg unload](#)

Some operations enable you to view or configure registry entries on local or remote computers, while others allow you to configure only local computers. Using **reg** to configure the registry of remote computers limits the parameters that you can use in some operations. Check the syntax and parameters for each operation to verify that they can be used on remote computers
