Tool: HermeticRansom

Names	HermeticRansom PartyTicket Elections GoRansom SonicVote
Category	Malware
Type	Ransomware
Description	(Kaspersky) On February 24, 2022, Avast Threat Research published a tweet announcing the discovery of new Golang ransomware, which they called HermeticRansom. This malware was found around the same time the HermeticWiper was found, and based on publicly available information from security community it was used in recent cyberattacks in Ukraine. The new ransomware was likely used as a smokescreen for the HermeticWiper attack due to its non-sophisticated style and poor implementation.
