

## Remote Access Tools: Remote Desktop Software, Sub-technique T1219.002 - Enterprise

Archived: 2026-04-02 11:37:56 UTC

An adversary may use legitimate desktop support software to establish an interactive command and control channel to target systems within networks. Desktop support software provides a graphical interface for remotely controlling another computer, transmitting the display output, keyboard input, and mouse control between devices using various protocols. Desktop support software, such as `VNC` , `Team Viewer` , `AnyDesk` , `ScreenConnect` , `LogMein` , `AmmyyAdmin` , and other remote monitoring and management (RMM) tools, are commonly used as legitimate technical support software and may be allowed by application control within a target environment.
