

DMSniff (Malware Family)

By Fraunhofer FKIE

Archived: 2026-04-05 17:37:04 UTC

DMSniff is a point-of-sale malware previously only privately sold. It has been used in breaches of small- and medium-sized businesses in the restaurant and entertainment industries. It uses a domain generation algorithm (DGA) to create lists of command-and-control domains on the fly.
