Tool: VolatileVenom

Names	VolatileVenom
Category	Malware
Type	Backdoor
Description	(Cybereason) VolatileVenom is one of APT-C-23's arsenal of Android malware. The attackers lure the victims into installing the VolatileVenom under the pretext that the suggested app is more "secure" and "discrete." Based on our investigation, it seems that VolatileVenom has been operationalized and integrated into the group's arsenal since at least April of 2020, and disguises itself using icons and names of chat applications.
