## Tool: HesperBot

Names	HesperBot
Category	<a href="#">Malware</a>
Type	<a href="#">Banking trojan</a> , <a href="#">Info stealer</a> , <a href="#">Keylogger</a> , <a href="#">Tunneling</a>
Description	( <a href="#">ESET</a> ) Despite being a “new kid on the block”, it appears that Win32/Spy.Hesperbot is a very potent banking trojan which features common functionalities, such as keystroke logging, creation of screenshots and video capture, and setting up a remote proxy, but also includes some more advanced tricks, such as creating a hidden VNC server on the infected system. And of course the banking trojan feature list wouldn’t be complete without network traffic interception and HTML injection capabilities. Win32/Spy.Hesperbot does all this in quite a sophisticated manner.
