## Tool: Flagpro

Names	Flagpro BUSYICE
Category	<a href="#">Malware</a>
Type	<a href="#">Reconnaissance</a> , <a href="#">Downloader</a>
Description	( <a href="#">NTT</a> ) Flagpro is used in the initial stage of attacks to investigate target's environment, download a second stage malware and execute it. An attack case using Flagpro starts with a spear phishing e-mail. The message is adjusted to its target organization. It is disguised as an e-mail communication with target's business partner. This means the attackers probed deeper into their target before attacking.
