

General Task Registration

By Archiveddocs

Archived: 2026-04-05 16:38:17 UTC

To create a task, register the task with the Task Scheduler service. When a task is created, it is stored in a task folder. You can change the access control list (ACL) for a task or task folder to allow or deny certain users and groups access to a task or a task folder.

Event ID	Source	Message
106	Microsoft-Windows-TaskScheduler	The user "%2" registered the Task Scheduler task "%1".
113	Microsoft-Windows-TaskScheduler	The Task Scheduler registered the task "%1", but not all the specified triggers will start the task. Ensure all the task triggers are valid. The error code is: %2.
115	Microsoft-Windows-TaskScheduler	Task Scheduler failed to roll back a transaction when updating or deleting a task. Additional Data: Error Value: %1.
116	Microsoft-Windows-TaskScheduler	Task Scheduler saved the configuration for task "%1", but the credentials used to run the task could not be stored. Ensure the credentials are valid and re-register the task. The error code is: %2.
140	Microsoft-Windows-TaskScheduler	User "%2" updated Task Scheduler task "%1"
141	Microsoft-Windows-TaskScheduler	User "%2" deleted Task Scheduler task "%1"
406	Microsoft-Windows-TaskScheduler	The Task Scheduler service failed to initialize the credentials store. The error value is: %1.
