

Applications that can bypass App Control and how to block them

By jsuther1974

Archived: 2026-04-05 22:36:27 UTC

Members of the security community* continuously collaborate with Microsoft to help protect customers. With the help of their valuable reports, Microsoft has identified a list of valid applications that an attacker could also potentially use to bypass App Control.

Unless your use scenarios explicitly require them, Microsoft recommends that you block the following applications. An attacker can use these applications or files to circumvent application allow policies, including App Control:

- addinprocess.exe
- addinprocess32.exe
- addinutil.exe
- aspnet_compiler.exe
- bash.exe
- bginfo.exe¹
- cdb.exe
- cscript.exe
- csi.exe
- dbgghost.exe
- dbgsvc.exe
- dbgsrv.exe
- dnx.exe
- dotnet.exe
- fsi.exe
- fsiAnyCpu.exe
- infdefaultinstall.exe
- kd.exe
- kill.exe
- lxssmanager.dll
- lxrun.exe
- Microsoft.Build.dll
- Microsoft.Workflow.Compiler.exe
- msbuild.exe²
- msbuild.dll
- mshta.exe
- ntkd.exe
- ntsd.exe

- powershellcustomhost.exe
- rcsi.exe
- runscripthelper.exe
- texttransform.exe
- visualuiaverifynative.exe
- system.management.automation.dll
- webclnt.dll/davsvc.dll³
- wfc.exe
- windbg.exe
- wmic.exe
- wscript.exe
- wsl.exe
- wslconfig.exe
- wslhost.exe

¹ A vulnerability in bginfo.exe was fixed in version 4.22. If you use BGInfo, for security, make sure to download and run the latest version of [BGInfo](#). BGInfo versions earlier than 4.22 are still vulnerable and should be blocked.

² If you're using your reference system in a development context and use msbuild.exe to build managed applications, we recommend that you allow msbuild.exe in your code integrity policies. Otherwise, we recommend that you block msbuild.exe.

³ If you block WebDAV DLLs, we recommend that you also disable the **WebClient** service using a group policy or MDM policies.

* Microsoft recognizes the efforts of people in the security community who help us protect customers through responsible vulnerability disclosure, and extends thanks to the following people:

Note

This application list will be updated with the latest vendor information as application vulnerabilities are resolved and new issues are discovered.

Certain software applications may allow other code to run by design. Unless these applications are business critical, you should block them in your App Control policy. In addition, when an application version is upgraded to fix a security vulnerability or potential App Control bypass, add *deny* rules to your App Control policies for that application's previous, less secure versions.

Microsoft recommends that you install the latest security updates. For example, updates help resolve several issues in PowerShell modules that allowed an attacker to bypass App Control. These modules can be blocked by their corresponding hashes.

As of October 2017, system.management.automation.dll is updated to revoke earlier versions by hash values, instead of version rules.

If you wish to use this blocklist policy on Windows Server 2016, locate the deny rules for the following files, and change the comment block to only include the rules for that OS version. Applying the RS5+ rules to Windows Server 2016 may cause apps to malfunction:

- msxml3.dll
- msxml6.dll
- jscript9.dll

The blocklist policy that follows includes "Allow all" rules for both kernel and user mode that make it safe to deploy as a standalone App Control policy. On Windows versions 1903 and above, Microsoft recommends converting this policy to multiple policy formats using the *Set-CiPolicyIdInfo* cmdlet with the *-ResetPolicyId* switch. Then, you can deploy it as a Base policy side-by-side with any other policies in your environment. To instead add these rules to an existing Base policy, you can merge the policy that follows using the *Merge-CIPolicy* cmdlet. If merging into an existing policy that includes an explicit allowlist, you should first remove the two "Allow all" rules and their corresponding FileRuleRefs from the blocklist policy.

App Control policy XML:

```
<?xml version="1.0" encoding="utf-8"?>
<SiPolicy xmlns="urn:schemas-microsoft-com:sipolicy">
  <VersionEx>10.1.0.2</VersionEx>
  <PolicyTypeID>{A244370E-44C9-4C06-B551-F6016E563076}</PolicyTypeID>
  <PlatformID>{2E07F7E4-194C-4D20-B7C9-6F44A6C5A234}</PlatformID>
  <Rules>
    <Rule>
      <Option>Enabled:Unsigned System Integrity Policy</Option>
    </Rule>
    <Rule>
      <Option>Enabled:Audit Mode</Option>
    </Rule>
    <Rule>
      <Option>Enabled:Advanced Boot Options Menu</Option>
    </Rule>
    <Rule>
      <Option>Enabled:UMCI</Option>
    </Rule>
    <Rule>
      <Option>Enabled:Dynamic Code Security</Option>
    </Rule>
