

DarkVNC (Malware Family)

By Fraunhofer FKIE

Archived: 2026-04-05 14:19:33 UTC

According to Enigmasoft, DarkVNC malware is a hacking tool that is available for purchase online. It can be used as a Virtual Network Computing service, which means that the attackers can get full access to the targeted system via this malware. However, unlike a genuine Virtual Network Computing utility, the DarkVNC threat operates in the background silently. Therefore, it is highly likely that the victims may not notice that their systems have been compromised.
