Tool: DebugView

Names	DebugView
Category	Tools
Description	<p>(Microsoft) DebugView is an application that lets you monitor debug output on your local system, or any computer on the network that you can reach via TCP/IP. It is capable of displaying both kernel-mode and Win32 debug output, so you don't need a debugger to catch the debug output your applications or device drivers generate, nor do you need to modify your applications or drivers to use non-standard debug output APIs.</p> <p>Part of SysInternals.</p>
Information	< https://docs.microsoft.com/en-us/sysinternals/downloads/debugview >
