

Cloud Storage Object Discovery, Technique T1619 - Enterprise

Archived: 2026-04-05 16:24:13 UTC

Adversaries may enumerate objects in cloud storage infrastructure. Adversaries may use this information during automated discovery to shape follow-on behaviors, including requesting all or specific objects from cloud storage. Similar to [File and Directory Discovery](#) on a local host, after identifying available storage services (i.e. [Cloud Infrastructure Discovery](#)) adversaries may access the contents/objects stored in cloud infrastructure.

Cloud service providers offer APIs allowing users to enumerate objects stored within cloud storage. Examples include ListObjectsV2 in AWS [\[1\]](#) and List Blobs in Azure [\[2\]](#).
