## A JavaScript and VBScript Based Empire Launcher - by Cn33liz 2017

Both Launchers run within their own embedded PowerShell Host, so we don't need PowerShell.exe. This might be usefull when a company is blocking PowerShell.exe and/or is using a Application Whitelisting solution, but does not block running JS/VBS files.

Empire PowerShell Host build by Cn33liz and embedded within JavaScript using DotNetToJScript from James Forshaw <https://github.com/tyranid/DotNetToJScript>

### Usage:

- \* Setup a new Listener within PowerShell Empire.
- \* Use the Launcher command to Generate a PowerShell launcher for this listener.
- \* Copy and Replace the Base64 encoded Launcher Payload within the StarFighter JavaScript or VBScript file.
- \* For the JavaScript version use the following Variable:  

```
var EncodedPayload = "<Paste Encoded Launcher Payload Here>"
```
- \* For the VBScript version use the following Variable:  

```
Dim EncodedPayload: EncodedPayload = "<Paste Encoded Launcher Payload Here>"
```
- \* Then run: wscript.exe StarFighter.js or StarFighter.vbs on Target, or DoubleClick the launchers within Explorer

## **BlueTeam Advice**

- Instead of Blocking PowerShell.exe, make sure you enable PowerShell Constrained Language to all of your users that do not need to use PowerShell for their daily work.
- Use Device Guard and make sure you only allow signed Java, VBS and PowerShell Scripts to prevent Malicious use.
