CapraRAT

Actor(s): [Operation C-Major](#)

According to PCrisk, CapraRAT is the name of an Android remote access trojan (RAT), possibly a modified version of another (open-source) RAT called AndroRAT. It is known that CapraRAT is used by an advanced persistent threat group (ATP) called APT36 (also known as Earth Karkaddan). CapraRAT allows attackers to perform certain actions on the infected Android device.
