Tool: Aggah

Names	Aggah
Category	Malware
Type	Loader
Description	(DeepInstinct) Aggah is distributed by Microsoft Office documents with malicious VBA macros in them. In this campaign we have seen several PowerPoint presentations, some with Covid-19 related names, and others are invoices. The presentations are usually empty of content, besides a short and simple VBA macro that uses a StrReverse function to evade basic detection by AV products. Once opened it downloads the next stage of the malware via the “Shell” command.
