

Remote Services: Windows Remote Management, Sub-technique T1021.006 - Enterprise

Archived: 2026-04-05 17:52:14 UTC

Adversaries may use [Valid Accounts](#) to interact with remote systems using Windows Remote Management (WinRM). The adversary may then perform actions as the logged-on user.

WinRM is the name of both a Windows service and a protocol that allows a user to interact with a remote system (e.g., run an executable, modify the Registry, modify services).^[1] It may be called with the `winrm` command or by any number of programs such as PowerShell.^[2] WinRM can be used as a method of remotely interacting with [Windows Management Instrumentation](#).^[3]
