

# GitHub - PwnTheStack/Qvoid-Token-Grabber: Grabs Discord tokens, browser cookies and passwords; Bypasses any kind of Token Protectors.

By PwnTheStack

Archived: 2026-04-05 17:37:15 UTC

Advanced grabber that grabs browser passwords, cookies, and Discord tokens with the computer information.

Our Discord Server: [discord.gg/2mC9f69x5](https://discord.gg/2mC9f69x5)

**I will no longer update this project, I will check and approve pull requests.**

## Features

- Protection (AntiDebug, AntiEmulation, AntiWebSniffers, AntiVM, AntiSandboxie) is controlled through the settings file.
- Discord webhooks integration.
- Grabs tokens from all installed clients even if the primary path changed and deletes accounts duplicates.
- Grabs PC information + token information.
- Shows top ten rarest friends.
- Grabs Discord password and sends the new info with every event that involves a password.
- Sends screenshot of all screens at the moment of the grabbing.
- Grabs browser cookies and passwords.
- Supports many Chromium-based & Gecko-based browsers. [Password & Cookies].
- WIFI passwords stealer.
- Crypto-clipper.
- Self-updating, When a new account is logged or a password changed, the grabber will send it again with the latest information.
- Bypasses Anti-Token-Grabbers.

## Some notes

**AFTER THE BUILD U CAN DELETE EVERYTHING IN THE OUTPUT DIRECTORY EXCEPT THE EXE FILE!**

I created this project for educational purposes only, so please do not use it to harm and damage; I started this project because I wanted to learn about Discord's infrastructure and possible exploits. Meanwhile, I made the base of this token-grabber (like a year ago), but not long ago, I continued this project, and this is the final result; of course, I will update it and add more features in the future, but mean-while remember to use your power for good

. If you liked it, consider  this project and  (follow) me .

## Additional Information

### What can I do against token grabbers?

To be protected against token grabbers, you are more than welcome to install my Anti-Token-Grabber, which is located on my GitHub. [I will upload it later; meanwhile, try <https://github.com/andro2157/DiscordTokenProtector> although this grabber is bypassing it, other grabbers are not]

### This project is under Berkeley Software Distribution (BSD) license.

- The source code doesn't need to be public when a distribution of the software is made.
- Modifications to the software can be released under any license.
- Changes made to the source code may not be documented.
- It offers no explicit position on patent usage.
- The license and copyright notice must be included in the documentation of the compiled version of the source code (as opposed to only in the source code).
- The BSD 3-clause states that the names of the author and contributors can't be used to promote products derived from the software without permission.

### Educational Purposes

"Copyright Disclaimer Under Section 107 of the Copyright Act 1976, allowance is made for "fair use" for purposes such as criticism, comment, news reporting, teaching scholarship, and research. Fair use is a use permitted by copyright statutes that might otherwise be infringing. Non-profit, educational, or personal use tips the balance in favor of fair use."

### LEGAL DISCLAIMER

The author does not hold any responsibility for the harmful use of this tool; remember that attacking targets without prior consent is illegal and punished by law.
