

# Steal or Forge Kerberos Tickets: Silver Ticket, Sub-technique T1558.002 - Enterprise

Archived: 2026-04-05 16:46:04 UTC

Adversaries who have the password hash of a target service account (e.g. SharePoint, MSSQL) may forge Kerberos ticket granting service (TGS) tickets, also known as silver tickets. Kerberos TGS tickets are also known as service tickets.<sup>[1]</sup>

Silver tickets are more limited in scope in than golden tickets in that they only enable adversaries to access a particular resource (e.g. MSSQL) and the system that hosts the resource; however, unlike golden tickets, adversaries with the ability to forge silver tickets are able to create TGS tickets without interacting with the Key Distribution Center (KDC), potentially making detection more difficult.<sup>[2]</sup>

Password hashes for target services may be obtained using [OS Credential Dumping](#) or [Kerberoasting](#).
