On Thanksgiving eve, Microsoft learned from a threat actor we had identified themes and referenced in our research consisted of tens of thousands of threads disrupted this campaign intelligence-based pre-

The URLs in the phishing emails used a domain permit-service[redacted] solve a slider CAPTCHA. The threat actors use to trick users into logging in and executed a co-

Like similar Storm-0900 activity, this campaign led to XWorm, a popular modular malware used by many threat actors for remote access, deployment of other malware, and data theft. XWorm uses plugins that threat actors can use to perform various tasks on compromised devices. These plugins have evolved over the years. While we have not observed it being used in attacks, the latest XWorm version includes a plugin for encrypting files, giving the malware ransomware capability.

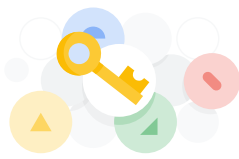

Storm-0900 is a prolific threat actor that, when active, launches phishing campaigns every week. The actor abuses many popular brands in their emails. This specific campaign, along with the parking ticket and medical test result themed emails, also utilized emails purporting to be from a health care company and a government health agency. Microsoft recommends continuously raising awareness of phishing campaigns, including attack simulation training, among users.
