

KHRAT (Malware Family)

By Fraunhofer FKIE

Archived: 2026-04-05 19:44:20 UTC

According to Unit42, KHRAT is a Trojan that registers victims using their infected machine's username, system language and local IP address. KHRAT provides the threat actors typical RAT features and access to the victim system, including keylogging, screenshot capabilities, remote shell access and so on.
