Threat Intelligence Report

Truesec exposes a Russian information operation.

Since January 23, 2023, a threat actor identifying as “Anonymous Sudan” has been conducting [denial of service \(DDoS\) attacks](#) against multiple organizations in Sweden. This group claims to be “hacktivists,” **politically motivated hackers from Sudan.**

Truesec’s [Threat Intelligence unit](#) has investigated the threat actor group to shed light on its activities and help identify its true motives.

Truesec’s report (published Feb 20) explains how the so-called “Anonymous Sudan” has nothing to do with the online activists collectively known as Anonymous. Instead, it was most likely created as part of a Russian information operation to harm and complicate Sweden’s NATO application.

Notes to version v 1.2

We have now added additional intelligence provided by our partners Baffin Bay Networks and by Microsoft, so we can paint an even fuller picture of the threat actor and it’s motives.
