TitanSourceCode

Official leak of source code titan stealer (whole). Includes server + client parts and admin panel. Written in C# (.NET) with library autoloading. Admin panel written in PHP

P.S Without shells and malware-code or etc!!! P.S 2 - Official features page: <https://telegra.ph/TITAN-CORPORATION-06-04> (Needs to translate on ENG)

My Telegram: @D4NTES

Titan Stealer Features:

1. The code is completely self-written
2. Collection of 70+ browsers
3. Collection of 70+ crypto wallets (in development)
4. Powerful File Graber
5. Convenient installation on the server in 3 clicks
6. Universal Web Panel
7. Software is installed on your server
8. Server-side decryption, all data transmitted by the stealer is decrypted on the server

Info:

1. The language used in the development is C# (ha-ha, not c++ and c), this (not) allows you to easily morph the styler later;
2. The combination of low/high level WinAPI allows you to achieve the best speed and gives a minimal chance for a bug;

3. Constant cleaning of the stub up to 0\26 (no)
4. Technical support for software around the clock (no)
5. Ease of use both for teams and for self-use
6. Now we will have frequent updates based on the wishes of software users.
7. Stiller is completely self-written and the code is not tied to a specific version of Windows, which opens up the possibility of flexible software settings;
